PIPING SOLUTIONS, INC.

TRIFLEX[®] versions 3.3.0 & 3.3.1
Release

Highlights of the Enhancements and Modifications

Output Results and Code Compliance Column Headings – TRIFLEX[®] now has the ability for users to customize the column headings they see within the program and when exported to EXCEL. If foreign ASCII fonts are available, these headings may be set to their foreign language equivalents using Windows settings.

Euro Code – Several modifications and corrections have been made to the Euro Code to insure its accuracy and usefulness.

PCF Export and Import – PCF export and import functionality has been greatly improved with provisions added such that TRIFLEX will accept some non-standard formatted files and will recognize a larger variety of optional constructs. Also, problems occurring with reducers were corrected in the PCF export feature.

Output Results and Code Compliance Printing – TRIFLEX[®] now incorporates a spreadsheet printing capability initiated by using the Print Reports item from the Utilities Menu, or the Print Icon on the main toolbar. This will allow the user to direct the following spreadsheets to an installed printer: the Input Spreadsheet, the Results Spreadsheet, the Code Compliance Specification Spreadsheet, and the Code Compliance Spreadsheet.

Structural Steel Dialog and Data Entry – The Structural Steel Dialog has been modified such that it is easier to enter and edit data for the User-Specified structural shapes: square, round, and rectangular bar, as well as round and rectangular tubing.

Please also see the Enhancements and Modifications page to see additional information on enhancements and modifications.

**Please contact us if you have any questions.
Thank you for your continued support.**
