PIPINGSOLUTIONS, INC.

TRIFLEX[®] versions 3.3.2
Release

Highlights of the Enhancements

PDMS Stress Interface File Import – Several improvements have been made in the ability of TRIFLEX to import the base file format for the PDMS Pipe Stress Interface tools and export changes made in TRIFLEX back to PDMS.

PCF File Import – The program has enhanced its import of PCF file format files used to interface with a variety of CAD systems including DescView's AutoCad Inventor and Plant 3D. In addition, the piping code now associated with a PCF import will be that which the user currently has selected in his Modeling Defaults Dialog.

Flange Report – The flange reporting feature of TRIFLEX now has an option as to how the Equivalent Pressure is to be calculated, either using Kellogg NB-3641.1 or NRC NC-3851.1.

Chinese Spring Hangers Added – A selection of spring hangers available from Chinese vendors, Bergen Power, China Steel, China Petrochemical, and China GB have been added to the Spring Hanger Manufacturer window in the Modeling Defaults Dialog.

Please also see the Enhancements and Modifications page to see additional information on enhancements and modifications.
